

CAD Drawing Management

Technologies Used: Windows Server, Windows Client, DCOM, ActiveX, Network Programming, MySQL This software is a client/server package for searching and viewing engineering CAD drawings from a central database. It provides facilities for searching of drawings by job number, section number or by text. The software has a separate module for entering and editing drawing information into its database. The server uses DCOM technology and clients connect to server through TCP/IP. Its notable features are:

- Central Database Server
- Accessible on an intranet
- Search and view CAD drawings in both raster and vector formats
