

Attendance Recording System

Technologies Used: Windows/Linux, Java, MS Excel, PDF, Platform Independant, Database Independant, Embedded Database, Barcode, RFID / Proximity Cards, Magnetic Stripe Cards This software allows an organization to record and keep track of attendance data for all its employees, providing customized reports for tracking attendance activity. Employees swipe their identification cards on the attendance terminals using barcode, magnetic or proximity readers. The terminals records the data directly onto a database server. Its notable features are:

- Reports can be viewed in Real-Time
- All reports can be saved as MS Excel, PDF, HTML and XML
- Works standalone, over an intranet or over the Internet
- Works with Barcode, Magnetic stripe cards or Proximity / RFID cards
