

Attendance Record Management System

Technologies Used: Windows Server, Web-based client, MySQL, Barcode
This software allows a web-based management of employee attendance data recorded by an Attendance Machine or software. The software includes adding/editing employee information, manually adding/editing employee attendance data, printing employee identification cards (barcode) and viewing employee's attendance data. Its notable features are:

- Central Database Server
- Accessible over an intranet or internet network
- Interactive web user interface
- Generation of web based reports
