

Library Management System

Technologies Used: Linux Server, Web-based client, MySQL, Cross-Browser Compatible This is a web based Library Management System. This software provides a web interface for inserting, editing, deleting as well as searching for books in a library. It provides facilities for searching of books by author name, book title or subject. Its notable features are:

- Web interface for searching and managing the library database
- Central Database Server
- Accessible over an intranet or internet
- Search by ISBN, Author, title and subject
